

Workshop on Analysis and Preparation of Human Sperm for Intrauterine Insemination

The objective of this program is to teach how to analyse human sperm samples and prepare them for intrauterine insemination.

In this workshop you will learn:

- Principles of sampling
- Macroscopic and microscopic examination of sperm samples
- Introduction to various sperm washing methods
- Introduction to sperm preparation methods for IUI

This workshop is suitable for graduates and students of MSc and PhD levels in reproductive biology and medical sciences. Participants should have previous knowledge about the principles of reproductive biology.
