

Workshop on Ovarian Tissue Cryopreservation by Slow Freezing and Vitrification

In this workshop the ovarian tissue histology and the necessities of ovarian preservation will be taught. Next, manipulating ovarian tissue for cryopreservation and two different routine methods for ovarian tissue cryopreservation will be trained. Banking principles and the usage of these cryopreserved tissues will also be discussed.

In this workshop you will learn:

- Histology of the ovarian tissue
- Different methods of ovarian tissue cryopreservation
- Banking principles

This workshop is suitable for graduates and students of MSc and PhD levels in biology, paramedical, and medical fields. Participants should have previous knowledge about the principles of reproductive biology, GMP, and GLP.
