

Workshop on General Histology and Immunostaining Techniques

In this workshop participants will be introduced to various types of antigens on the cell surface and in the tissue, antibodies in tissue staining technique, and monoclonal and polyclonal antibodies.

In this workshop you will learn:

- Factors affecting the antigen-antibody reaction
- Principles of fluorescent microscopy and imaging of stained tissue
- Working with image processing software

This workshop is suitable for graduates and students of all academic levels in biology, paramedical, and medical fields. The participants should have knowledge about the basic and methods of Immuno-histochemistry.
